Analysis

> challenges

The majority of African news websites are not user-friendly on mobiles. For example, the content is not readable and the touch target size is too small. And the loading speed and response speed is rather unsatisfied, either.

➤ best case

Senenews.com

> Recommendations:

Since 70% of internet access in Africa is through mobile, the web sites should focus on their performance on the phone.

- Define a viewport
- Make text readable
- Increase touch target size
- Leverage browser caching
- Eliminate render-blocking JavaScript and CSS in above-the-fold content
- Compressing resources with gzip or deflate to reduce the number of bytes sent over the network.
- Properly formatting and compressing images for higher loading speed

Appendix - Evaluation Criteria

Attributes	Details	Check	Description	
Layout	Define A View Port	✓	<pre><meta content="width=device-width,initial- scale=1, minimum-scale=1,maximum-scale=1,user- scalable=no" name="viewport" viewport"=""/></pre>	
		Text Readable	✓	16pt Minimum & Increase Contrast
	Content	Separate Alternations To The DOM	✓	Loading Page Separately
Content	Optimize Image	✓	Properly formatting and compressing images can save many bytes of data.	
	Page Loading	✓	The whole page loading speed	
Speed	CSS, JS Loading	✓	Eliminate render-blocking JavaScript and CSS in above-the-fold content	
	Feedback Speed	✓	Feedback needs to be instant, and will visually confirm the user's actions.	
Network	Leverage Browers Caching	✓	Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.	
	Enable Compression	✓	Compressing resources with gzip or deflate can reduce the number of bytes sent over the network.	
	Serve Response	✓	Server response time measures how long it takes to load the necessary HTML to begin rendering the page from your server	
	Lv3 - Grace	✓	Good visual design	
Aesthetics	Lv2 - Color Matching	✓	No color conflicts	
	Lv1 - Uniform Style	✓	The uniform font, not too many ads
